The National Centre for Critical Infrastructure Protection (CNPIC) is the organism in charge of promoting, coordinating and supervising all critical infrastructure protection (CIP)-related activities for which the Secretariat of State for Security is competent at national level.

Our main objective is promoting and coordinating the mechanisms needed to guarantee the security of the infrastructures that supply services that are essential to our society, encouraging to this end all the agents of the System to take part in their respective fields of competence. By means of all these efforts, we want to promote a security model based on mutual trust, creation a public-private partnership that will allow minimizing the vulnerabilities of critical infrastructure in Spain.
