

Australian Signals Directorate

Reveal Their Secrets - Protect Our Own

CSOC - Cyber Security Operations Centre

In January 2010 the then Defence Signals Directorate established the Cyber Security Operations Centre to develop a comprehensive understanding of ICT security threats to critical Australian systems, and coordinate a response to those threats across government and industry. The CSOC has since evolved into the [Australian Cyber Security Centre \(ACSC\)](#), opened in November 2014, which is the next evolution of Australia's cyber security capability.
