Meta-data information viewer in JPEG

WEFA

As the capacity of digital cameras and storage devices becomes larger, it is general to have a large amount of digital videos, and especially JPEG format is considered as the most popular video format. JPEG format contains various metadata information, in which there is useful information for digital forensic investigation. Therefore, it is important to check the metadata information in JPEG file, which should be analyzed by considering that it is dependent on the device or program which creates JPEG file.
