#### A ONE STOP FOR SECURITY IN PAKISTAN!

Computer security has been a problem in Pakistan from the past couple of years, as hackers now are targeting government and corporate services to steal data and information. Not only hackers located outside Pakistan, but now hackers inside Pakistan are also hacking their easy targets with new and old exploits, taking command of the vulnerable target server. From intelligent hackers working for governments and corporate companies to a bored script kiddie, they all are an obvious danger to your network.

PakCERT Security Services were introduced to provide anyone the means to protect their valuable information assets by giving organizations and individuals direct access to hackers and other IT professionals not usually available for hire. We protect the information assets of our clients through the use of education, technology and experience, while maintaining the strictest levels of confidentiality in the industry. Armed with the latest exploit codes and techniques the underground is using for years to compromise your networks, we use the same techniques to harden your network from such intruder attacks.

#### OUR MISSION

- Promoting cooperation amongst IT constituents for the effective prevention, detection, and recovery from computer security incidents;
- Providing a means for the communication of alert and advisory information on potential threats and emerging incident situations;
- Promoting the sharing of computer security information, tools, and techniques,
- Providing professional security services to harden networks from intruder attacks.

#### AFFILIATION

PakCERT is a member of Asia Pacific Security Incident Response Coordination Working Group (APSIRC-WG)
