BSI TR-03129 PKIs for Machine Readable Travel Documents-Protocols for the Management of Certificates and CRLs

The Technical Guideline 03129 specifies web-service based communication protocols for the exchange of certificate applications, certificates and certificate revocation lists, for example between the PKIs members in the context of official documents.

Part 2 (TR-03129-2) of this technical guideline specifies PKI-related communication protocols for security mechanisms in the context of machine readable travel documents. This document is part of the TR-03129 series and depends on the TR-03129 base document that describes the basic communication protocols, security mechanisms, data structures etc. The target audience for this document are official authorities in the context of document checks (e. g. at the border control) that want to build an official inspection system.
