

National Cyber Security Strategies in the World

7 February 2013, Brussels - A free and open Internet is at the heart of the new Cyber Security Strategy by the European Union High Representative Catherine Ashton and the European Commission. The new Communication is the first comprehensive policy document that the European Union has produced in this area. It comprises internal market, justice and home affairs and the foreign policy aspects of cyberspace issues. ENISA has listed all the documents of National Cyber Security Strategies in the EU but also in the world. This information is based on publicly available material. Some of these documents are still under consultation so no official translations in English were produced.

European Union

Austria

[Austrian Cyber Security Strategy \(2013\)](#)
