The Tunisian honeynet project " [Saher-HoneyNet](#)" is an initiative launched by the Tunisian CERT, in order to mitigate threats related to malicious traffic and to improve the national cyberspace security by ensuring preventive and response measures to deal with malicious threats.

This project involves all the cyberspace stakeholders, including the government, ISPs, Telcos, and critical information infrastructure. In order to create a strong coordination space with them, we assist them by providing a framework to share information for cleaning-up the cyberspace and tracking malicious sources.

Currently we are more focusing on visualization issue and on information sharing automation by developing a new web service based platform to connect our partners and sharing with them all information in a very secure and reliable way.

All team members belong to the staff of the National Agency for Computer Security and the Tunisian CERT; our chapter is opened for volunteers based on a special agreement, such as students, researchers, professional and partners.

Tunisian HoneyNet Project Team:

Hafidh Faleh : Tunisian HoneyNet chapter lead.

Haythem EL MIR: CTO of NACS /tunCERT.

Hassen Bahri : tunCERT Manager

Mourad Ben Lakhoua : Malware research Center manager

Marwen Ben Rached : Cyber early warning system team member – programmer

Jihene Ksiksi : Cyber early warning system team member – support and maintenance
