PUBLICATIONS

NIST's Computer Security Division uses various publications to promulgate computer security standards and guidelines and present relevant supporting information and research.

Standards, guidelines, recommendations, background information and overviews are available in the following NIST technical series, and [publication drafts are available for public comment](#):

[Federal Information Processing Standards \(FIPS\)](#): security standards;

[NIST Special Publications \(SPs\)](#): security guidelines and recommendations. These include both SP 800-series (computer security) and selected SP 500-series (information technology) publications directly relevant to computer security;

[NIST Interagency or Internal Reports \(NISTIRs\)](#): documentation that supports and provides background information for FIPS and SPs; and

[Information Technology Laboratory \(ITL\) Bulletins](#): monthly overviews of NIST's security publications, programs and projects.

CSD staff also publishes computer security research in [journal articles](#), [conference proceedings](#), [books](#) and other "white papers."

Also available on this site are [early computer security papers \(1970-1985\)](#), an archive of [proceedings from NIST's national computer security conferences \(1979-2000\)](#), and other [selected historical computer security papers](#).

Other documents published by NIST or authored by NIST staff are available on the [NIST Publications Portal](#).
